How Your First Interest Payment is Calculated

A simple guide every lender should know

The Two Dates That Matter

You Invest
Your participation date

Waiting Days
Interest counted for these days only

First Payment
Monthly interest payment date

Every deal has a fixed **monthly interest payment date** — the date on which interest is credited to lenders every month. This date is set when the deal is created and does not change.

When you invest in a deal, your **first payment** covers only the days between your participation date and the next interest payment date. From the second month onwards, you receive a full month's interest on that same fixed date every month.

Why Are 2 Days Excluded?

When counting the days for your first payment, we exclude 2 days — here is the simple reason:

Two days are not counted because:

1. **Your participation date** — If you invest in the evening or at night, your funds are not deployed by OxyLoans on that same day. Processing happens the next morning. So Day 1 (your participation date) is not counted.
2. **The interest payment date** — On the day your interest is paid out, processing is already under way. That day is also not counted as an interest-earning day.

This is a standard and fair practice followed across lending platforms to ensure interest is counted only for days your money is actually deployed and working.

🗓️ Every Month = 30 Days

> OxyLoans counts **every month as exactly 30 days** for interest calculation — whether it is January (31 days), February (28 or 29 days), or any other month. This is called the **30/360 convention** and is the standard in P2P lending.

This means your monthly interest is always consistent and predictable. A lender investing ₹20 lakhs at 1.75% always earns exactly **₹35,000 per month** — no more, no less, regardless of the month.

It also means the 31st of any month is treated the same as the 30th for calculation purposes.

🧮 The Simple Formula

1. Count the days between your participation date and the interest payment date (using 30-day months), then **subtract 2** (your participation day and the payment day are both excluded).
   `Days = (Payment Date − Participation Date) − 2`
2. Calculate your monthly interest.
   `Monthly Interest = Investment × Monthly Rate ÷ 100`
3. Divide by 30 to get one day's interest.
   `Daily Interest = Monthly Interest ÷ 30`
4. Multiply by the number of days counted in Step 1.
   `First Payment = Daily Interest × Days`

📊 Examples

₹20 Lakhs invested at 1.75% per month

Example 1 **Invested on 1 Aug · Interest payment date: 31 Aug**

Investment Date	Payment Date	Investment	Monthly Rate
1 Aug 2026	**31 Aug 2026**	**₹20,00,000**	**1.75%**

31st treated as 30th (30-day rule) → Aug 1 to Aug 30 = **30 days**

Subtract 2 (participation day + payment day) → **28 days counted**

Monthly interest = ₹20,00,000 × 1.75% = ₹35,000

Daily interest = ₹35,000 ÷ 30 = ₹1,166.67

First payment = 28 × ₹1,166.67 = **₹32,667**

First payment on 31 Aug
From Sep onwards: ₹35,000 every month
₹32,667

Example 2 **Invested on 13 Aug · Interest payment date: 31 Aug**

Investment Date	Payment Date	Investment	Monthly Rate
13 Aug 2026	**31 Aug 2026**	**₹20,00,000**	**1.75%**

31st treated as 30th (30-day rule) → 30 − 13 = 17 days

Subtract 2 (participation day + payment day) → **15 days counted**

Monthly interest = ₹35,000 · Daily interest = ₹1,166.67

First payment = 15 × ₹1,166.67 = **₹17,500**

First payment on 31 Aug
From Sep onwards: ₹35,000 every month
₹17,500

Example 3 **Invested on 1 Aug · Interest payment date: 5 Sep (cross-month, 34 days)**

Investment Date	Payment Date	Investment	Monthly Rate
1 Aug 2026	**5 Sep 2026**	**₹20,00,000**	**1.75%**

Aug full month (30) + Sep 5th day (5) = 35 days

Subtract 2 (participation day + payment day) → **33 days counted**

Monthly interest = ₹35,000 · Daily interest = ₹1,166.67

First payment = 33 × ₹1,166.67 = **₹38,500**

First payment on 5 Sep (just over a month)
From Oct onwards: ₹35,000 every month on the 5th
₹38,500

? Common Questions

Q. Why is my first payment smaller than my usual monthly interest?

Because your first payment covers only the days between when you invested and the next fixed interest payment date — not a full month. From the second month onwards you receive the full amount every month.

Q. What is the monthly interest payment date?

It is the fixed date on which OxyLoans credits interest to all lenders in that deal. This date is the same every month throughout the deal. For example, if the payment date is the 30th, you receive interest on the 30th of every month.

Q. Why does February also use 30 days?

OxyLoans uses the 30/360 convention — every month is treated as 30 days so that interest is consistent and fair for every lender regardless of which month they invest in. February's shorter calendar does not reduce your interest.

Q. Is my money earning interest from the day I invest?

Your money is deployed from the next working day after your participation. The 2-day exclusion accounts for this processing time — one day on your side (late-night investments) and one day on the payment side.

Q. If the payment date is the 31st, do I lose a day?

No. The 31st is treated as the 30th in our 30/360 calculation, so it has the same value as the 30th. You do not lose any interest.
